

Personal Portfolio Website

Full Project Documentation & Architecture Overview

1. Project Overview

Designed and developed a fully responsive personal portfolio website to showcase skills, projects, certifications, and achievements. The website provides a clean user experience, modern UI, and easy navigation while reflecting expertise in Web Development, Digital Marketing, and Generative AI. It was made with the help of Speckit for project planning and structure, then customized with HTML, CSS, and JavaScript.

2. Technologies & Tools Used

- Speckit (Project Planning & Structure)
- HTML5 (Semantic Layout & Accessibility)
- CSS3 (Vanilla CSS, Glassmorphism, Dark/Light Themes)
- JavaScript (Dynamic Rendering, Modals & Navigation)

3. Key Features & Deliverables

- Interactive Single-Page & Multi-Page Navigation
- Theme Switcher with Dark & Light Modes
- Action Modal Integration for Direct Contact
- SEO-Optimized Metadata and Fast Performance
- Clean Mobile & Desktop Responsive Design

4. Architecture & Technical Breakdown

The project architecture follows modular CSS design tokens and decoupled JS components. High-contrast typography and glowing neo-minimalist accents are used throughout the application to deliver a state-of-the-art developer showcase.
