

AI-Driven Marketing & Content Automation

End-to-End Generative AI Workflow & Strategy Documentation

1. Project Overview

An end-to-end automation workflow that harnesses the power of Generative AI and Prompt Engineering to produce highly engaging, trending content daily. It seamlessly crafts platform-optimized captions for LinkedIn, Instagram, and X (Twitter), paired with visually stunning infographics and poster designs. By automatically organizing all assets into structured folders, this tool delivers publish-ready content, drastically saving manual effort for marketers.

2. Technologies & Tools Used

- Generative AI (ChatGPT, Claude & Custom Prompts)
- Prompt Engineering & Structured Output Parsing
- Workflow Automation Scripts
- Social Media Marketing Strategy & Analytics

3. Key Features & Deliverables

- Automated Multi-Platform Caption Generation
- Infographic & Poster Concept Synthesis
- Structured Folder Asset Organization
- Daily Content Calendar Synchronization
- 90% Reduction in Content Creation Time

4. Architecture & Technical Breakdown

The system pipeline processes raw marketing topics into structured prompt chains. Outputs are parsed into JSON templates, linked with image asset generation tools, and routed into publish-ready folders for seamless social media scheduling.
